Chapter 1	Introduction	8
-----------	--------------	---

Part one: Measuring muscle mass in the ICU

Chapter 2	Measuring and monitoring lean body mass in critical illness.	22
Chapter 3	Low skeletal muscle area is a risk factor for mortality in mechanically ventilated critically ill patients.	38
Chapter 4	Skeletal muscle quality as assessed by CT-derived skeletal muscle density is associated with 6-month mortality in mechanically ventilated critically ill patients.	52
Chapter 5	Identifying critically ill patients with low muscle mass: Agreement between bioelectrical impedance analysis and computed tomography.	70

Part two: Nutrition in the ICU

Chapter 6	Early high protein intake is associated with low mortality and energy overfeeding with high mortality in non-septic mechanically ventilated critically ill patients.	100
Chapter 7	Achieving protein targets without energy overfeeding in critically ill patients: A prospective feasibility study.	118
Chapter 8	Early high protein intake and mortality in critically ill ICU patients with low skeletal muscle area and –density.	142

Part three: Synthesis

Chapter 9	General discussion	178
	Nederlandse samenvatting	192
	<i>Addenda</i>	
	Dankwoord	200
	About the author	206
	Publications	210
